

Summary of suggested changes for the Air Traffic Control framework.

General:

1. The first suggestion is to change the level from vocational to community college because the only Florida institutions teaching this program are Miami-Dade Community College and Embry-Riddle Aeronautical University.
2. The paragraph that emphasized medical qualifications and security background requirements has been moved to the first section of the framework.

Specific:

1. A list of tools and equipment has been added as a reference.
2. The intended outcome dealing with safety and legal aspects have been repositioned to one and two respectively to emphasize the significance of these two outcomes.
2. Three new intended outcomes and associated student performance standards have been added. They are air traffic control fundamentals, air traffic control tower procedures, and air traffic control radar/non-radar procedures.
3. The “employability skills” outcome has been renamed “workforce/workplace readiness skills” and the associated performance standards have been increased to cover all aspects of working with and for others.
4. A section has been added at the end of the performance standards that provides website references and distance learning courses offered for this program.
